

Universal Data Interface

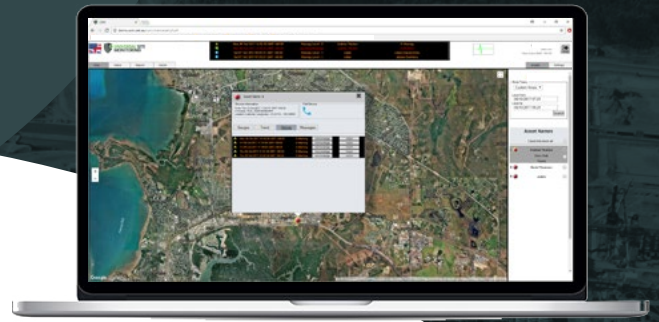

All your essential safety data accessible from anywhere, at any time.

The Universal Data Interface is a smart alert and navigation system that is fully integrated with all of our products. This easy-to-use web based mapping interface collects and displays information via a variety of wireless communication methods, allowing data to be monitored,

reported on, actioned and stored in a centralised location. It provides real-time data stream of critical operational information that ensures complete worker oversight of not just one, but multiple devices displayed in a single customised format.

The monitoring solution for comprehensive worker safety.

From alerts, trend monitoring and real-time communications, the Universal Data Interface provides you with full control room visibility at all times.

Features and Benefits

ALARMING OF KEY METRICS

Including speed, movement, location, altitude, personal biometrics and atmospheric data

FLEXIBLE ALERT CONFIGURATIONS

Set against pre-determined parameters and customisable thresholds

GEO-FENCE BOUNDARIES

Implement trigger alerts on entry or exit zones

MULTIPLE DEVICE AND SENSOR STATUSES

Provide complete oversight for a variety of assets simultaneously

PERMISSIONED SETTINGS

Customise data accessibility to limit specific information on devices and features

SMART ACTION RESPONSE MODULE

Create default action responses and response logs to maximise efficiency during emergency situations

Voice communications and messaging is made directly from the console as well as any firmware, trigger and language pack updates. Operators can use this system with full assurance that the latest system features are controlled, ensuring safety is at the forefront of any operation.

Every feature of the Universal Data Interface is completely custom configured to suit your business needs, however simple or complex, and is available in multi-language for global deployment.

Let us help you transform worker protection.
